

# PRESENTATION OF TECHNICAL SOLUTIONS

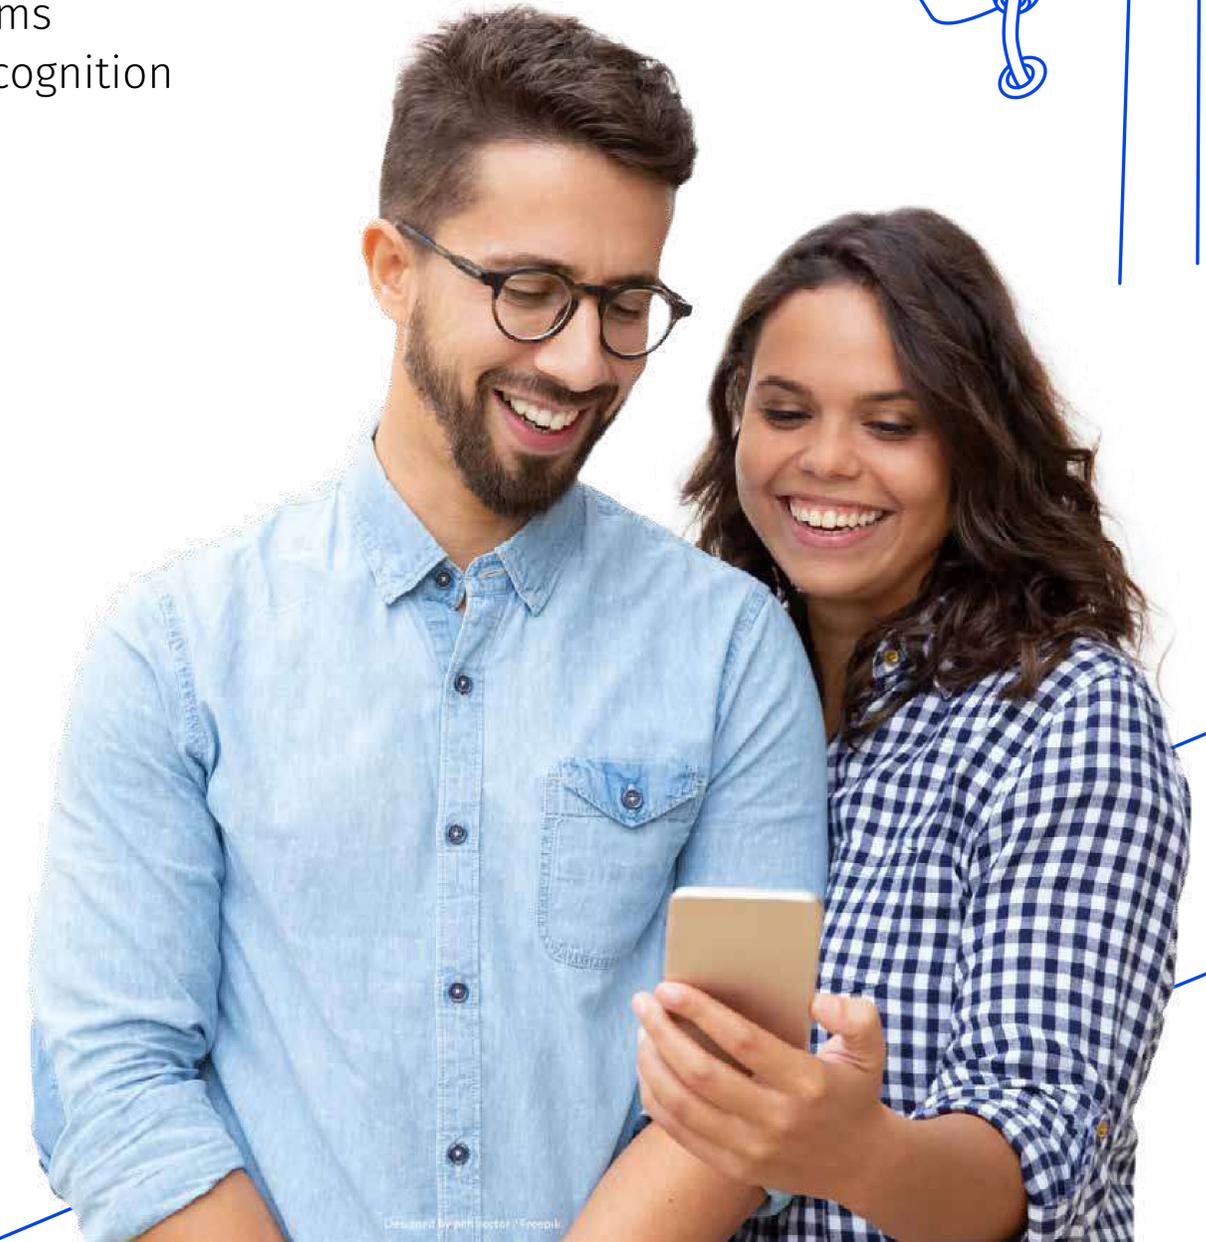

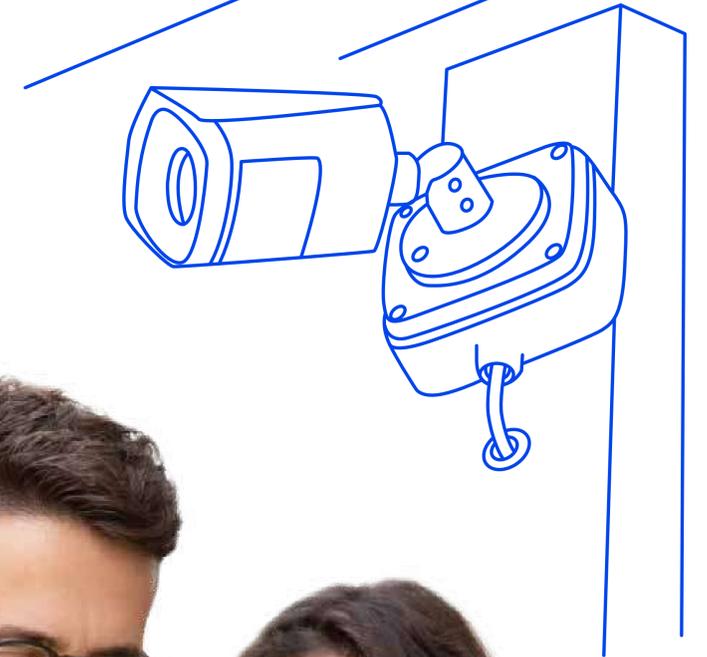

# FLUSSONIC WATCHER

● **A modern video surveillance system** that addresses the classical and specific tasks in the areas of security, video broadcasting, video recording, and providing remote access to recording archives and distributed IP cameras.

**A ready-to-use, scalable, and easy-to-implement network-oriented solution** for a wide range of tasks on video surveillance – from the organization of classical systems on closed, local, and geographically distributed objects to intelligent video recognition on the basis of neural networks. The main applications:

- The launch of video surveillance services for subscribers, based on the **VSaaS model**.
- **The establishment of monitoring centres** for monitoring, control and management of a large number of cameras.
- Control by using intelligent video analytics based on **neural networks**.
- A convenient and fast integration of video surveillance system into complex **IT projects**.

# FLUSSONIC WATCHER

## EMBEDDED SOFTWARE

### Module

The modification of the original firmware of IP cameras for direct and secure connection to the server, without NAT settings.

### Firmware

Firmware for IP cameras that improves performance, security, functionality and quality of video delivery.

## SERVER SOFTWARE

### Web server

Reliable and convenient software for video surveillance systems.

### SDK

Developers kit for integration with complex software solutions.

### Mobile apps

Applications for real time access to video surveillance systems.

## VIDEO ANALYTICS

### Cars

A trainable set of features for monitoring of car location changes.

### People

Face recognition by the analysis of individual characteristics of a person.

# SERVER SOFTWARE

## ● Web server

Watcher server software consists of a server part and an HTML5-based web interface as a client part, which allows you to quickly access the system through any modern browser without the need to install additional components.

## ● It offers the following features:

- Watching live video from cameras with the **minimum of delay.**
- Viewing and downloading of video archive with **no limitation of depth.**
- Support for **web maps.**
- **Remote control** of IP cameras.
- **Recording and viewing events** received from cameras.
- **Detailed control** of user access rights.
- Working with intelligent **video analytics reports.**
- System management via **a separate web interface** for the administrator.
- **Secure API calls** for system management from the outside.
- **GUI branding** and customizing.

# SERVER SOFTWARE

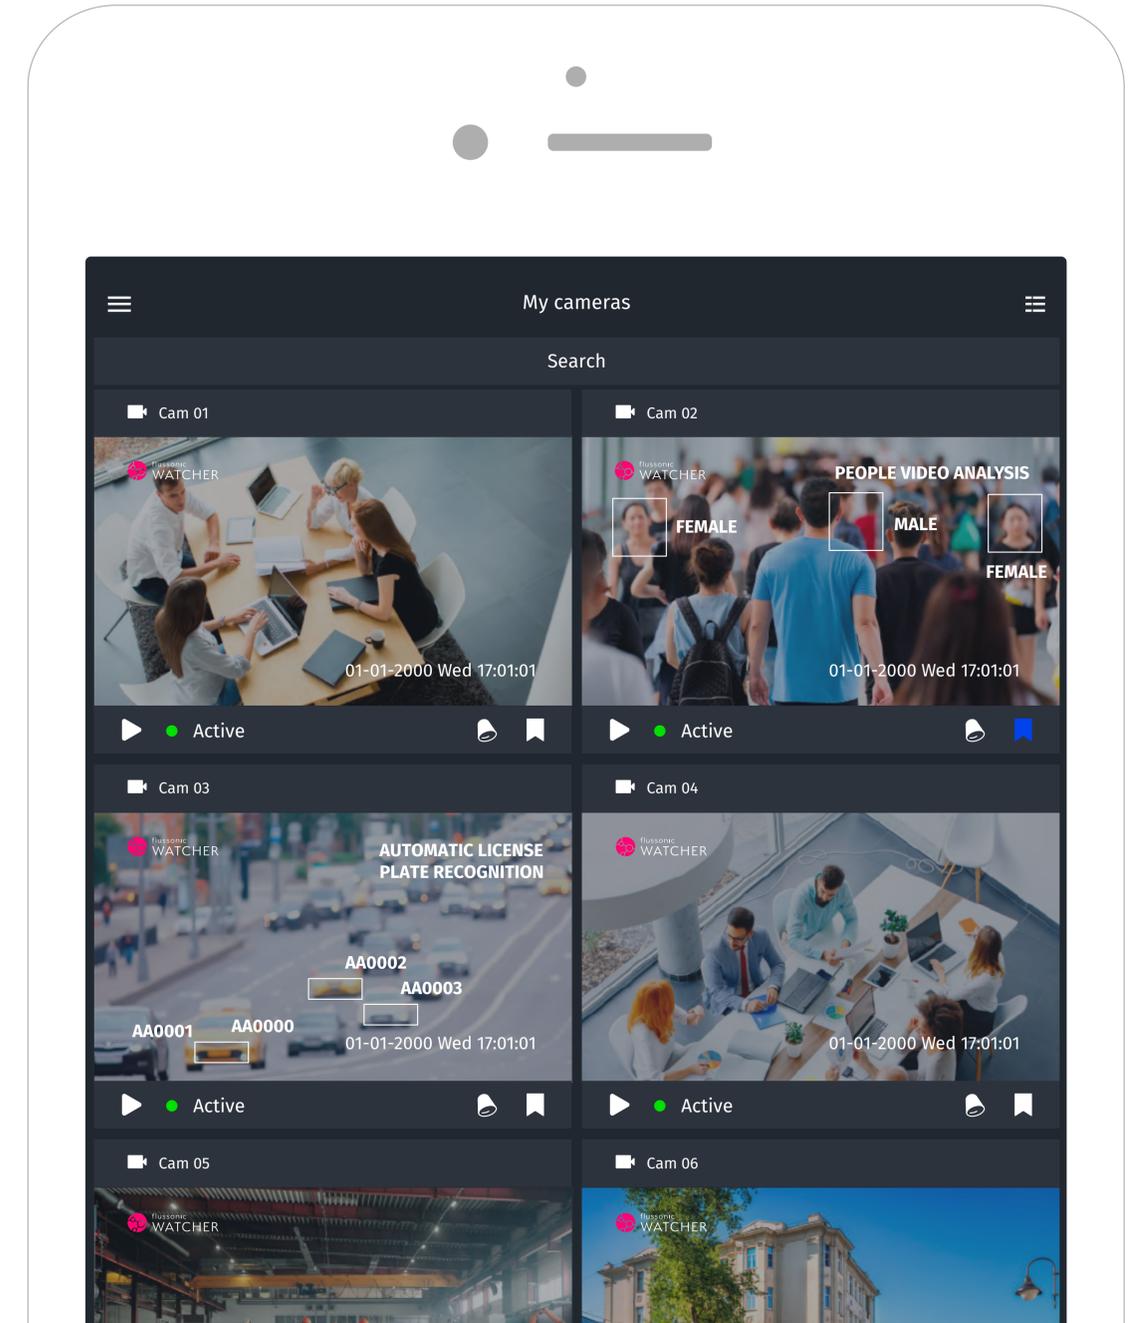

## Mobile app

The Watcher mobile app is a client software for real time access to the video surveillance system. It has access control and notification features.

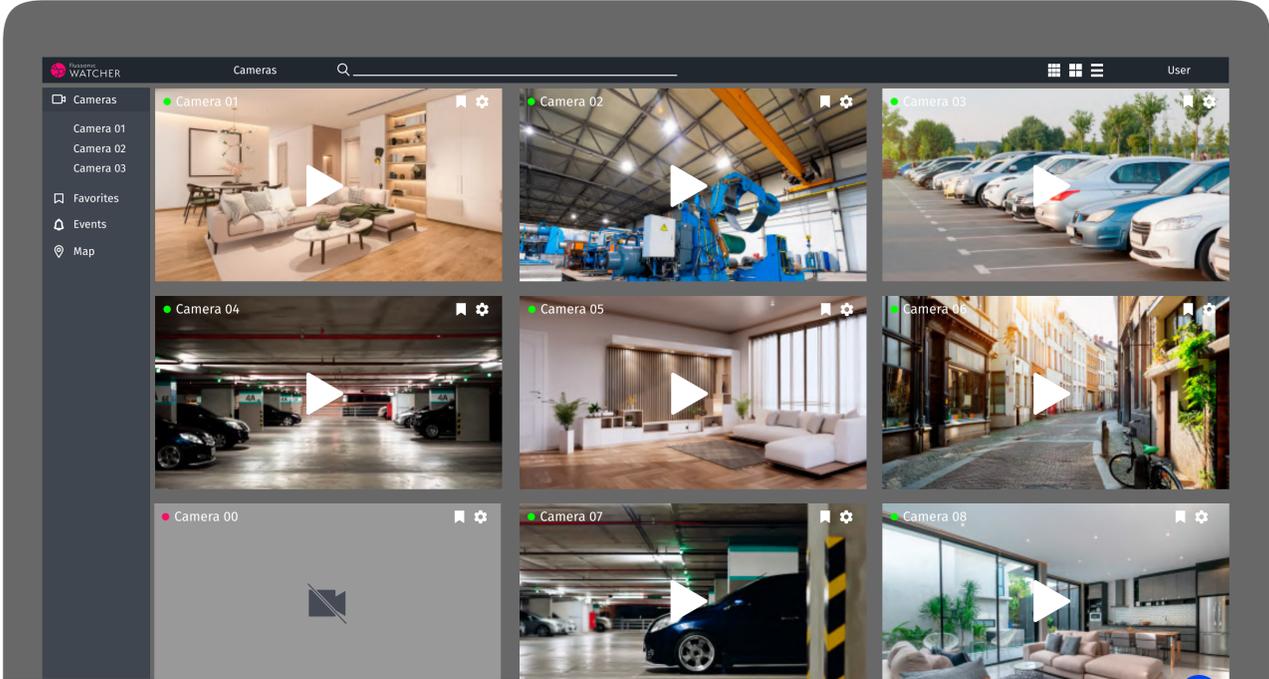

### It provides:

- Watching live video from IP cameras with **the minimum of delay.**
- Viewing the archive with **no limits on its depth.**
- Access control based on **a fingerprint\* or a PIN code.**
- **TLS encryption** of video streams.
- **Push notifications** about events.
- **Downloading** video screenshots.

# EMBEDDED SOFTWARE

- **Agent** is a modification of the original cameras' firmware for direct and secure connection of an IP camera to a Flussonic server.
  - **Automated direct connection** to the server without the need to configure NAT, VPN, or port forwarding rules.
  - **Reliable** TLS encryption of a video stream between a camera and a server.
  - Connects automatically to the Flussonic server in **plug'n'play** mode
  - Compatible with **the majority** of IP cameras on the market.

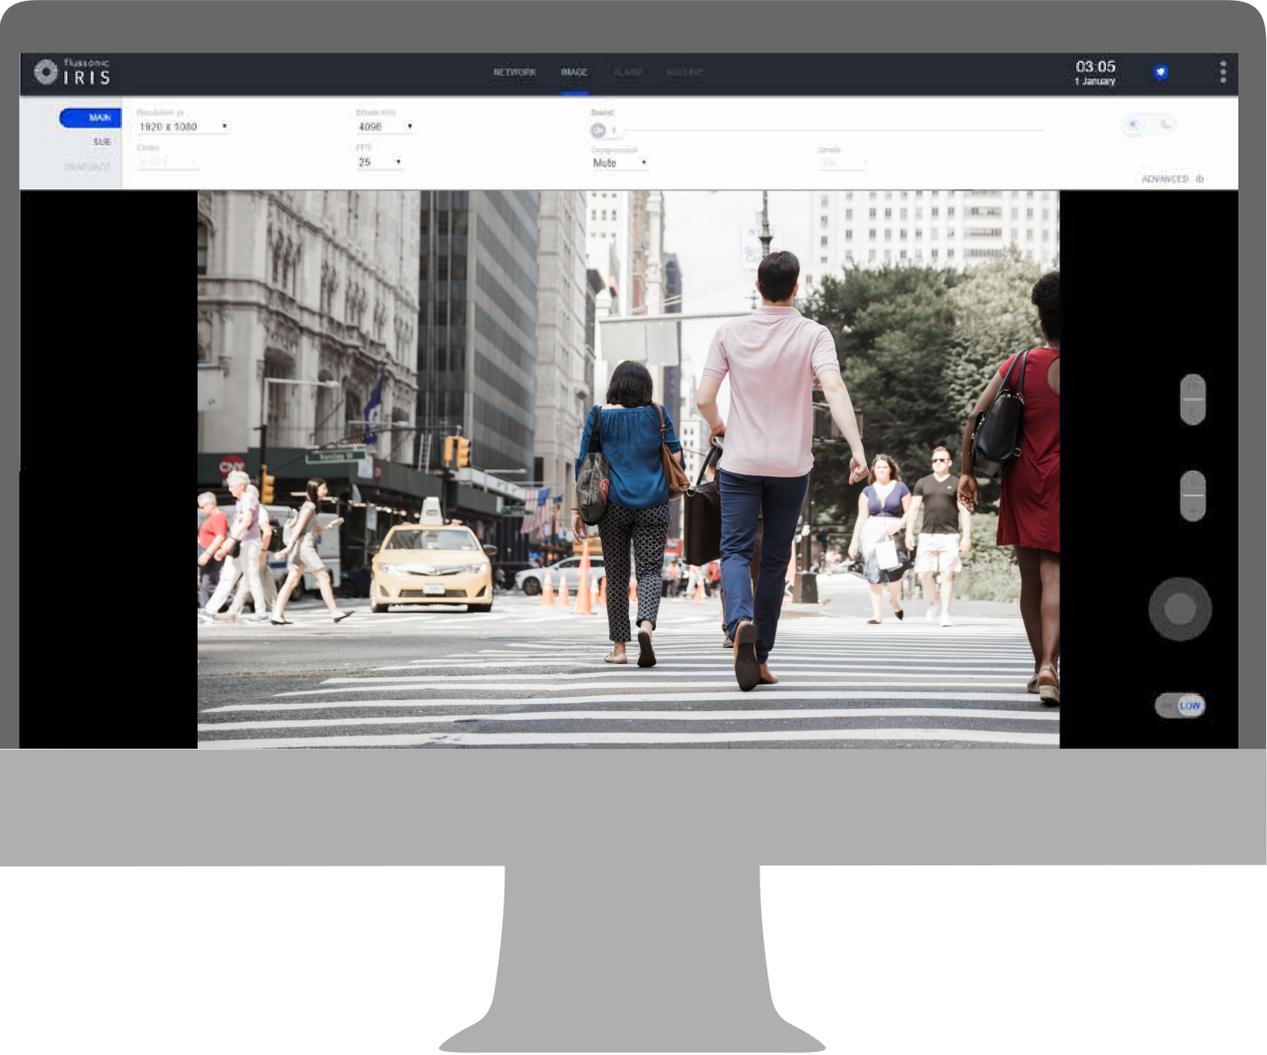

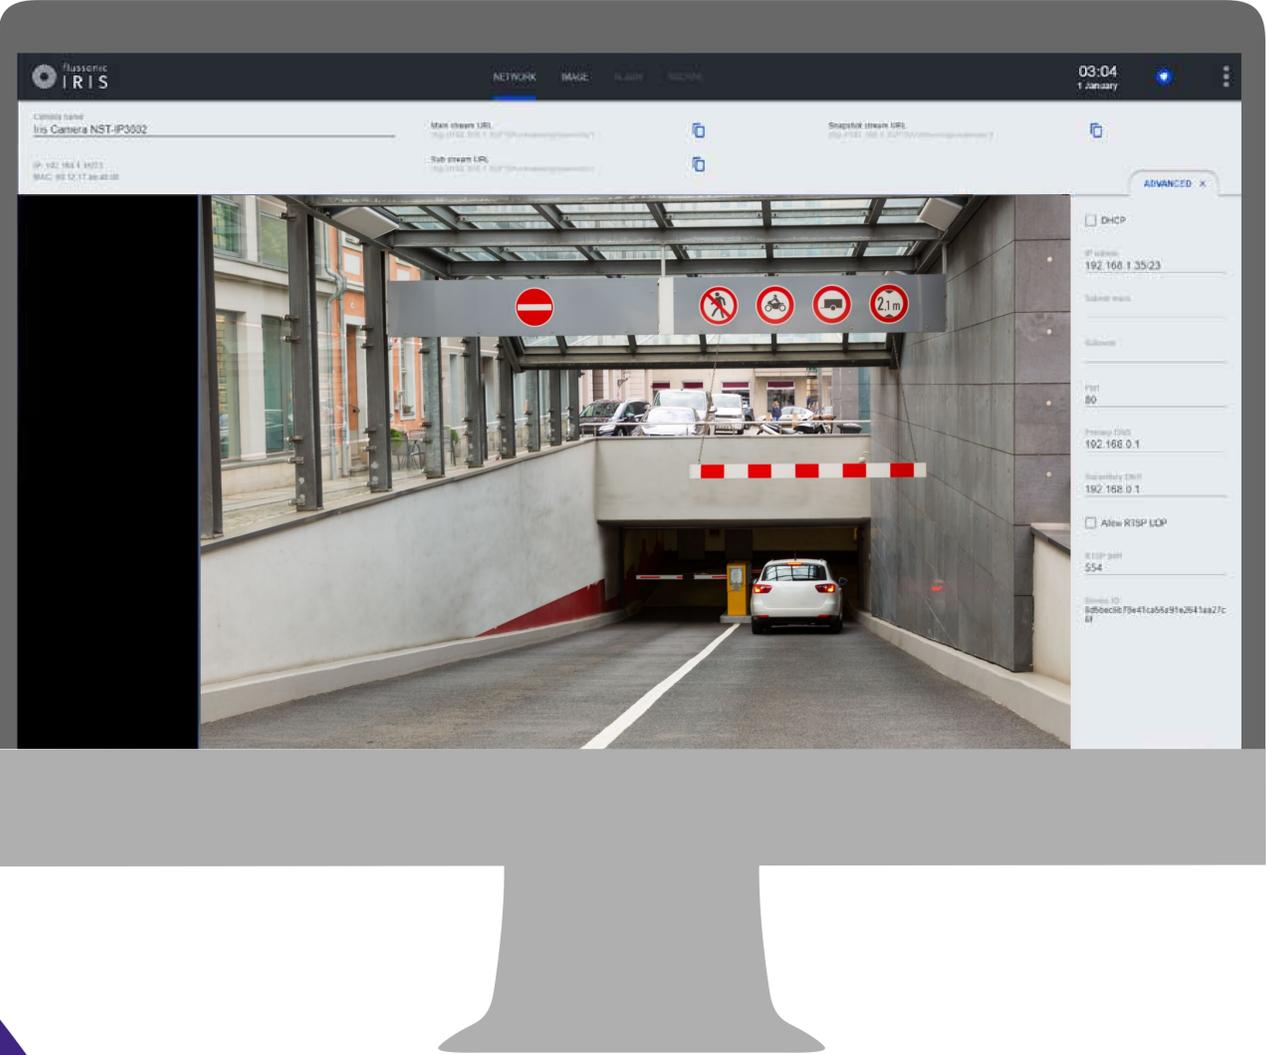

# EMBEDDED SOFTWARE

- **IRIS is firmware developed by Flussonic** for IP cameras. It is installed instead of the original firmware in order to expand camera capabilities:
  - Camera control **via an HTML5 web interface from any modern browser** without the need to install additional components.
  - **Reliable and secure TLS encryption** of a video stream between a camera and a server.
  - Information reliability and high resistance to unauthorized **access**.
  - Increased performance allowing for a large number of simultaneous **direct connections to a camera**.

# FLUSSONIC IRIS SCREENSHOTS

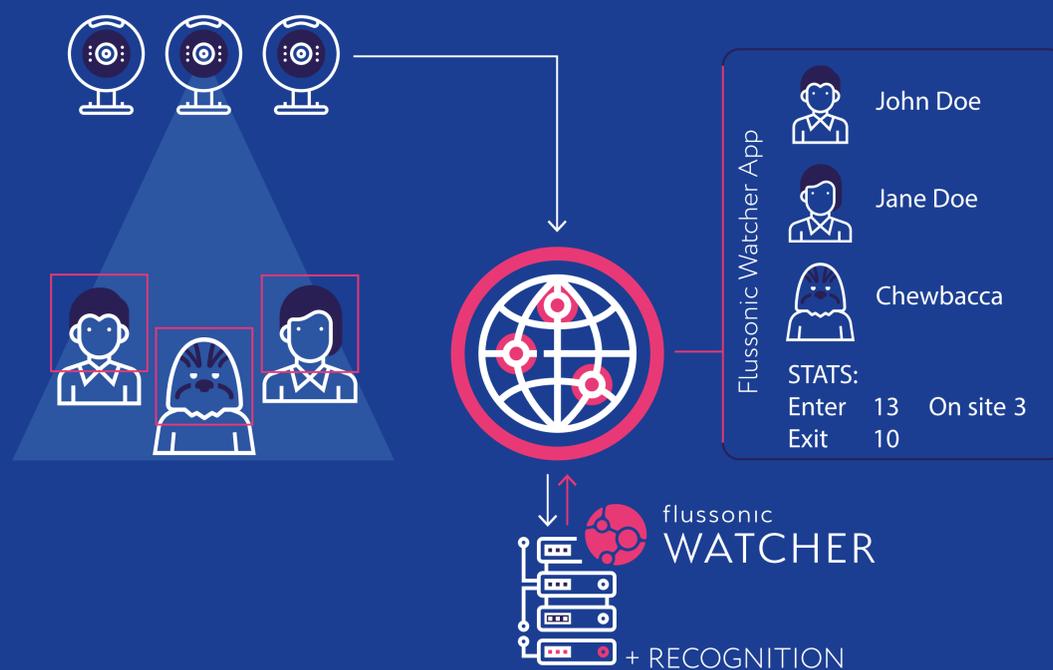

# VIDEO ANALYTICS

Flussonic Watcher has a built-in video analytics subsystem based on neural networks, with the constantly growing set of features. At the moment, Flussonic Watcher **can solve problems related to identification and recognition of objects** in a camera's frame and provision the results to external systems through a protected API.

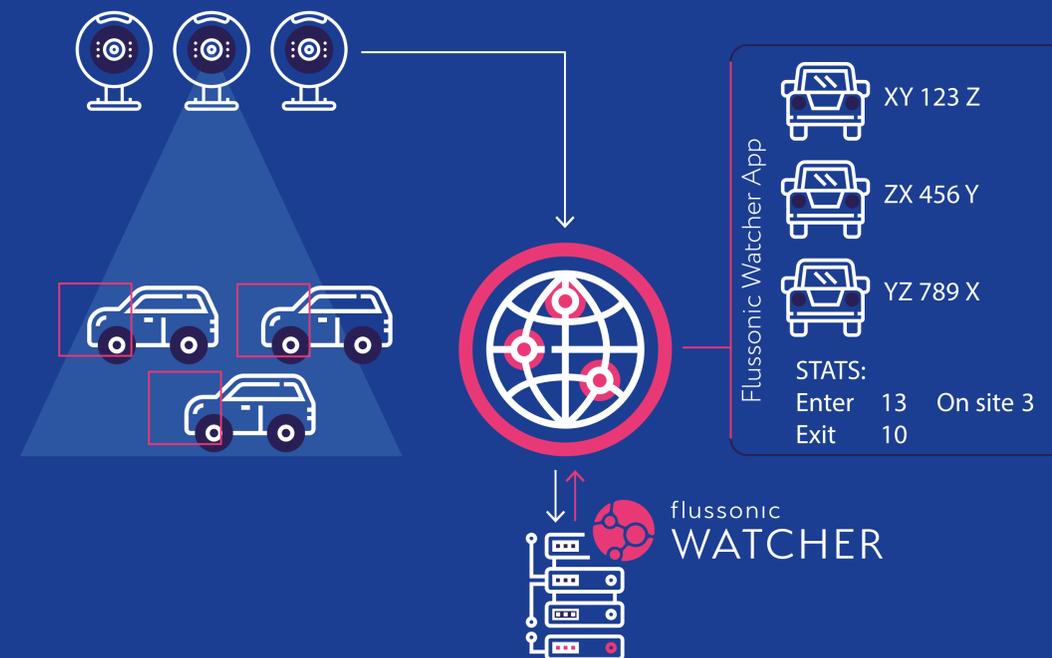

## People:

- Face **detection**.
- Face **recognition**.
- **Counting faces** in the frame.
- **Human** detection.
- Analytical **reports**.

## Cars:

- **License plate detection** and car license recognition.
- **Counting cars** in a camera's frame.
- Detection of **special vehicles**.
- **Automatic correction** of the angle of rotation of a car's license plate.
- Advanced analytical **reports**.

# FLUSSONIC WATCHER for Internet Service Providers

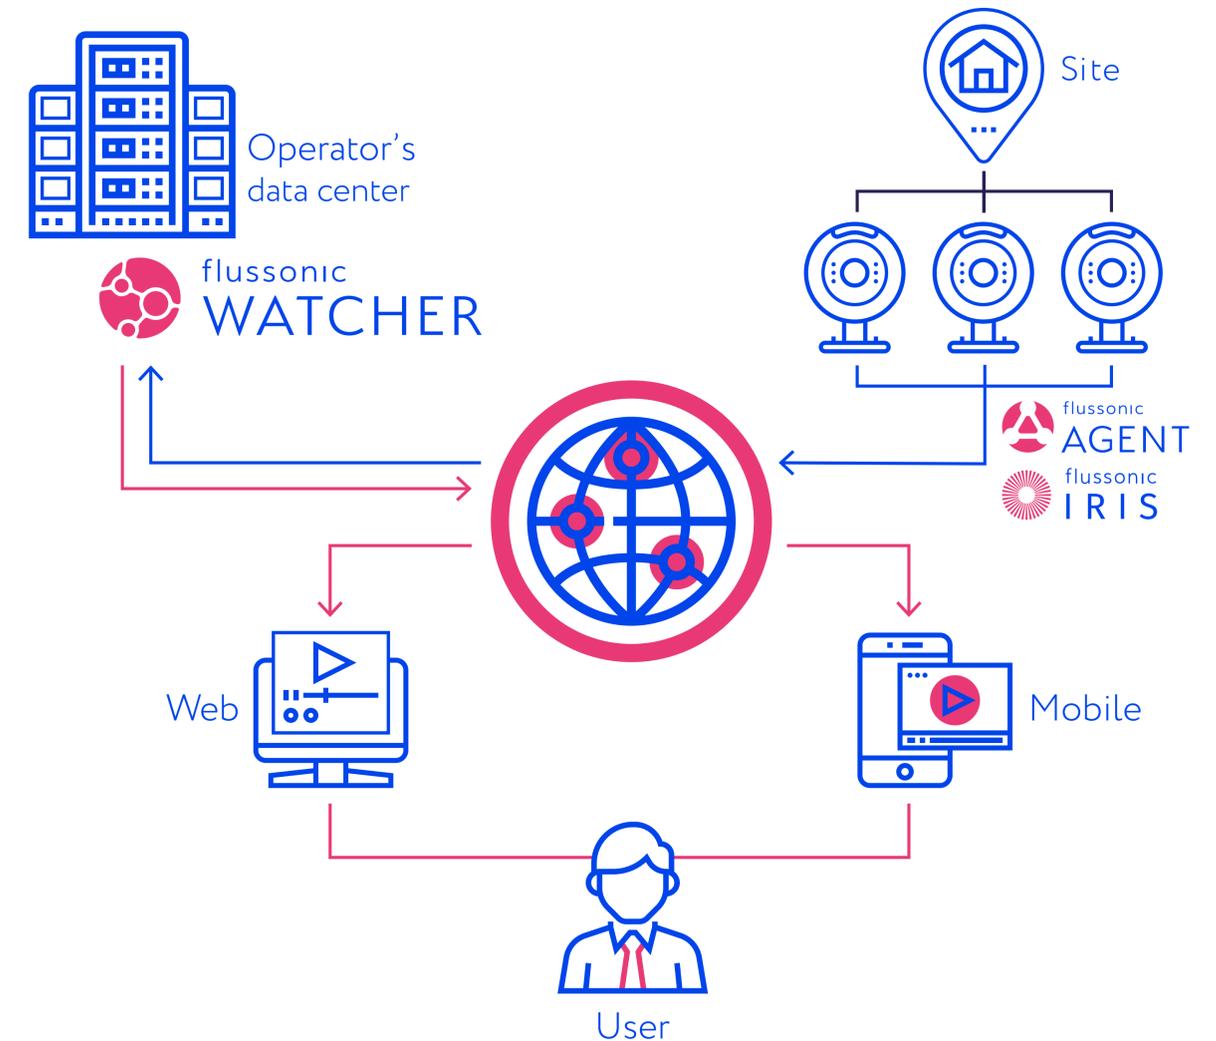

- A solution for Internet and telecom providers, companies providing complex services for end users: **Internet, TV, telephony, video surveillance, and access control.**
- FEATURES:
  - **Increased profit** margin from your customer base.
  - **Integration** into an existing IT infrastructure.
  - **Adding new services** to the package.
  - **Full management** and access via the API.
- ADVANTAGES:
  - **A ready-to-use** embeddable solution.
  - All you need to organize your own **service out-of-the-box.**
  - **Increased profitability** of existing customers.

# FLUSSONIC WATCHER for Internet Service Providers

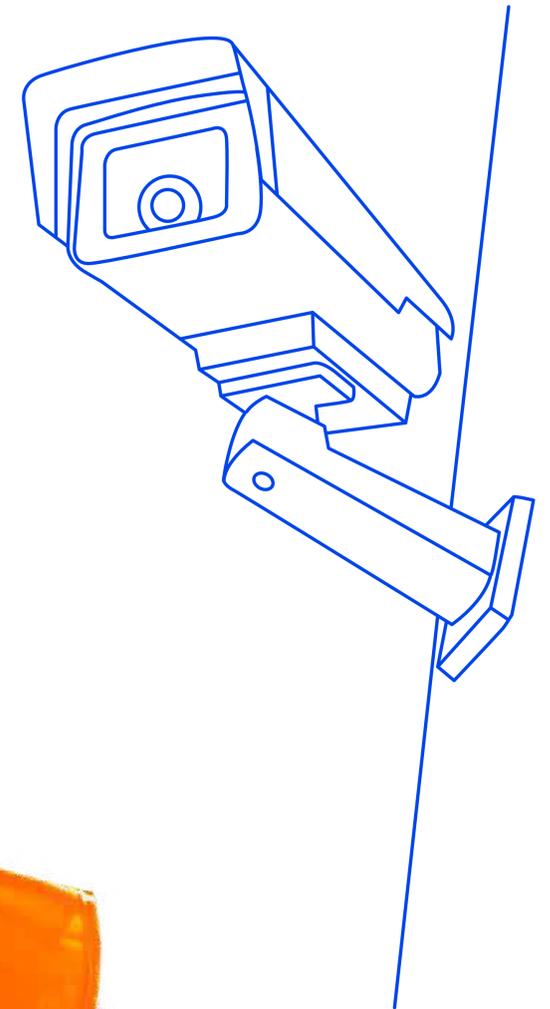

## BENEFITS:

- **Infrastructure optimization** – a single server with Flussonic Watcher guarantees stable operation with a large number of cameras (up to 1000).
- **Profit from the first month** – thanks to the use of a subscription model (for licenses with per-camera charging), the maintenance costs are covered by the subscription fee.
- **Reduced installation costs** – plug`n`play connection of cameras to a video surveillance service, without the need to have a "white" IP address, configure NAT, VPN, or port forwarding rules.
- **High security TLS encryption** of all connections between a camera and a server.
- **Excellent reliability** – failover mode for emergency situations.
- **Full branding** – Flussonic Watcher with the possibility of using your own logos and interface style elements in web and mobile applications.

# FLUSSONIC WATCHER for Installation Companies

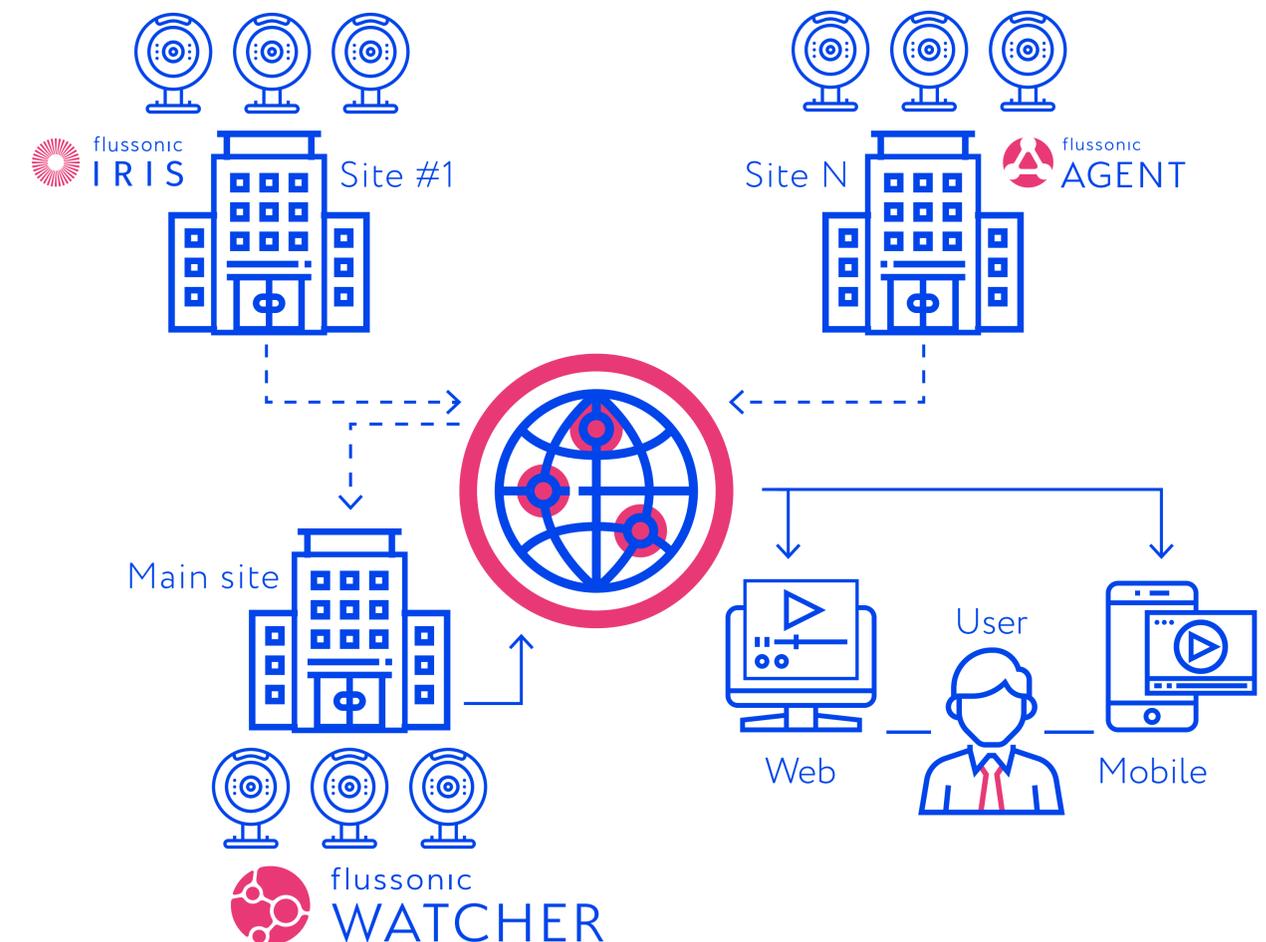

- **A solution for design and installation companies** that design, supply, install, configure, and maintain low current systems.
- **FEATURES:**
  - Installation of **video surveillance** on the customer site.
  - Setup of **a video analytics** system.
  - Building **a scalable infrastructure** for video surveillance on geographically distributed objects.
- **ADVANTAGES:**
  - **Fast and convenient configuring** of the system.
  - **High reliability** and safe TLS encrypted connections.
  - Reliability and resistance to unauthorized access due to the built-in failover mechanism.

# FLUSSONIC WATCHER for Installation Companies

## BENEFITS:

- **Infrastructure optimization** – a single server with Flussonic Watcher guarantees stable operation with a large number of cameras (up to 1000).
- **Profit from the first month** – thanks to the use of a subscription model (for licenses with per-camera charging), the maintenance costs are covered by the subscription fee.
- **Reduced installation costs** – plug`n`play connection of cameras to a video surveillance service, without the need to have a "white" IP address, configure NAT, VPN, or port forwarding rules.
- **High security** TLS encryption of all connections between a camera and a server.
- **Excellent reliability** – failover mode for emergency situations.
- **Full branding** – Flussonic Watcher with your own logos and interface style elements in web and mobile applications.

# FLUSSONIC WATCHER for Software Developers

● A solution for companies involved in **the development of complex software products** that use video surveillance as one of their components.

● FEATURES:

- **Convenient built-in software** for ingest, storage, processing, and distribution of video
- **A full-featured API** for accessing the video and using the functions of video surveillance.

● ADVANTAGES:

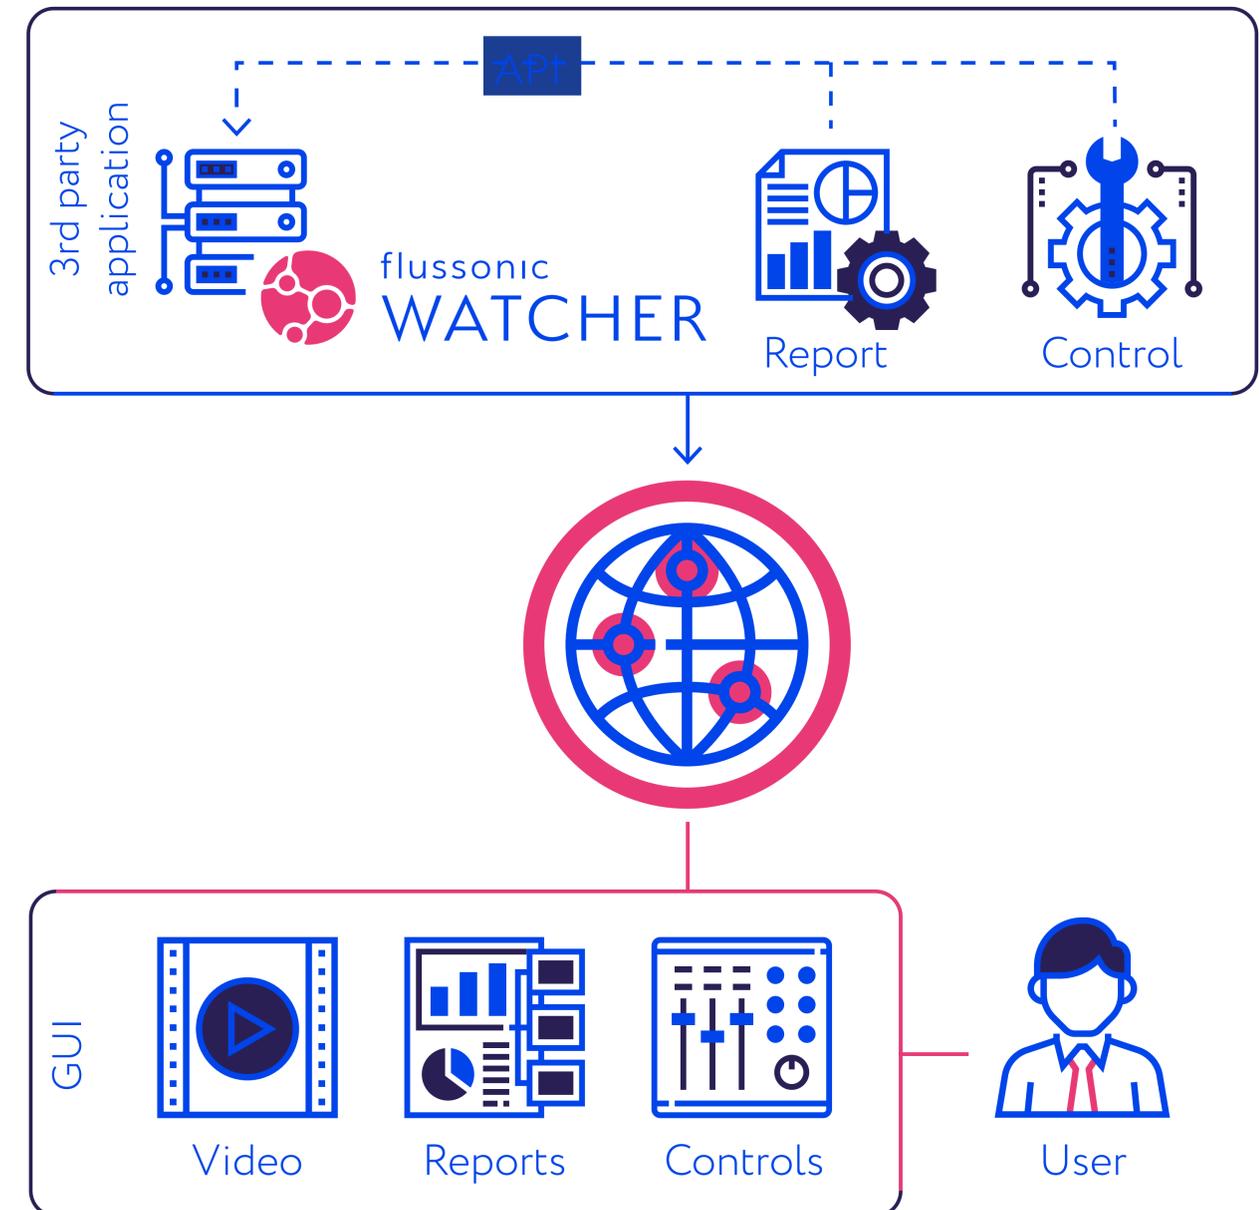

- **Faster development** of your systems.
- **Your solution** is reliable because it uses a professionally created video processing system.

# FLUSSONIC WATCHER for Software Developers

## BENEFITS:

- Availability of a convenient **full-featured** API for integrating Watcher into a complex project.
- Prompt and competent support through our **help desk**.
- You can use only those Flussonic Watcher components that your project requires (such as the **backend, widgets, mobile SDK**, and so on).
- Work with users, cameras, billing, authorization backend, and mobile application **via the API**.
- Reduced development time thanks to using **ready components**.

# FLUSSONIC WATCHER for Monitoring Centers

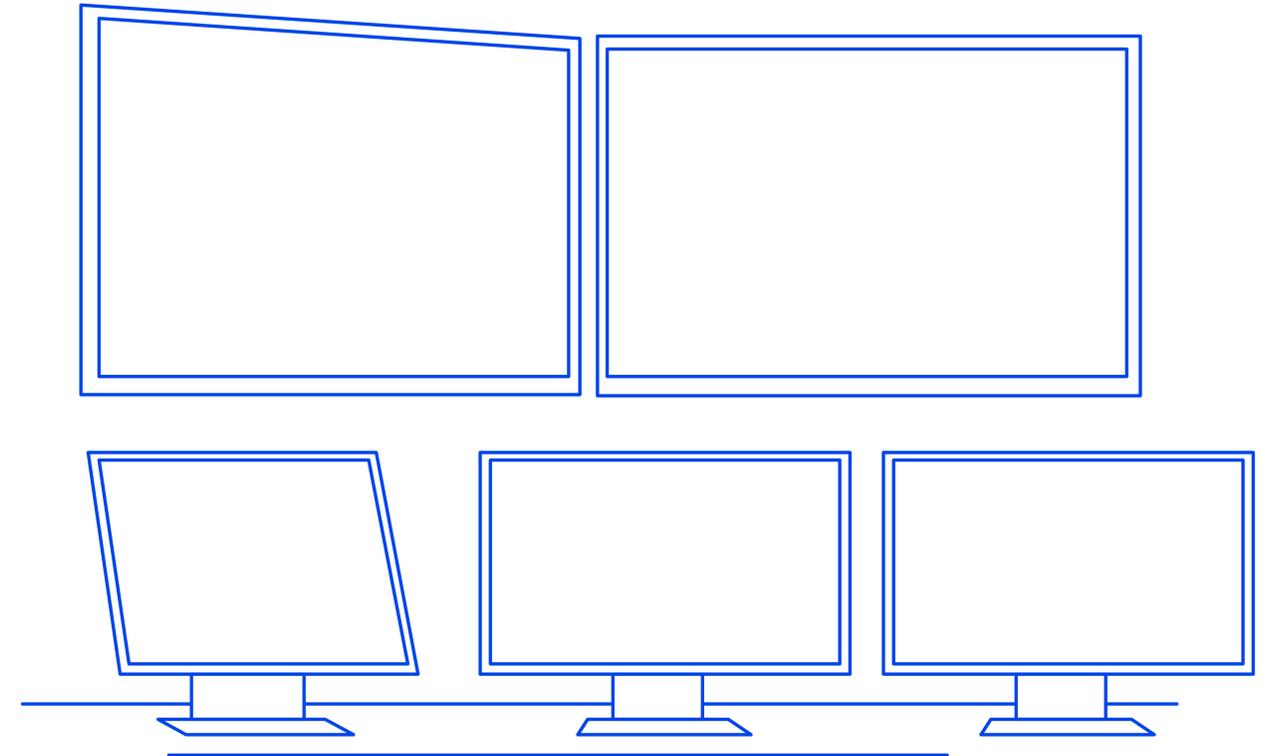

● A solution for services that focus on remote monitoring of a large number of distributed objects, the collection of performance indicators, situation analytics, and monitoring of industrial production processes.

● FEATURES:

- Collecting **a large number of surveillance** cameras and other sources of video in a single system.
- **Real-time** notifications of events coming from various sources.
- **Real-time control** and tuning the server and the system (health check).

● ADVANTAGES:

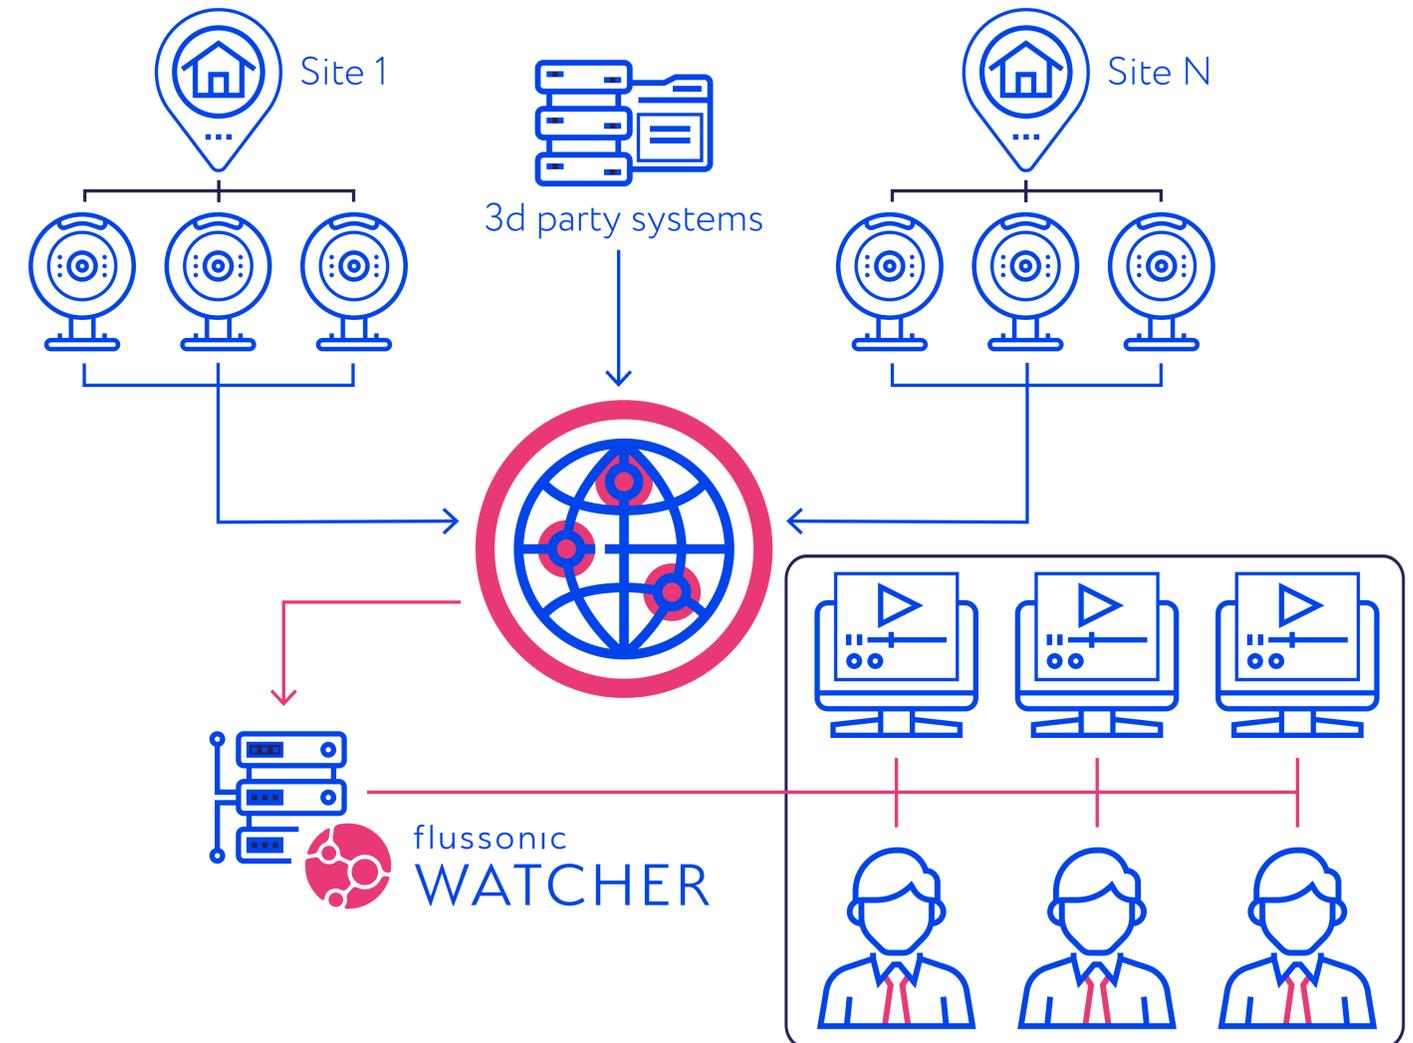

- **Integration of a large number of information** systems with access via a single user interface.
- **A single monitoring center for managing** remote objects and processes.

# FLUSSONIC WATCHER for Monitoring Centers

## BENEFITS:

- **Quick data exchange** with other systems via an open API.
- **Convenient built-in mechanisms** for collecting system usage statistics and detailed analysis of its performance, including information on CPU and HDD, as well as SMART monitoring
- The support for **an unlimited number** of data sources (such as video cameras, external systems, or analytics systems).
- **Reliable built-in failover mechanisms** – database replication, the use of backup servers, connection monitoring, and the support for RAID configurations.
- **High-tech and easy** scalability of the system.

# SYSTEM REQUIREMENTS FOR WATCHER

## Managing server (Endpoint). Runs Watcher and the database:

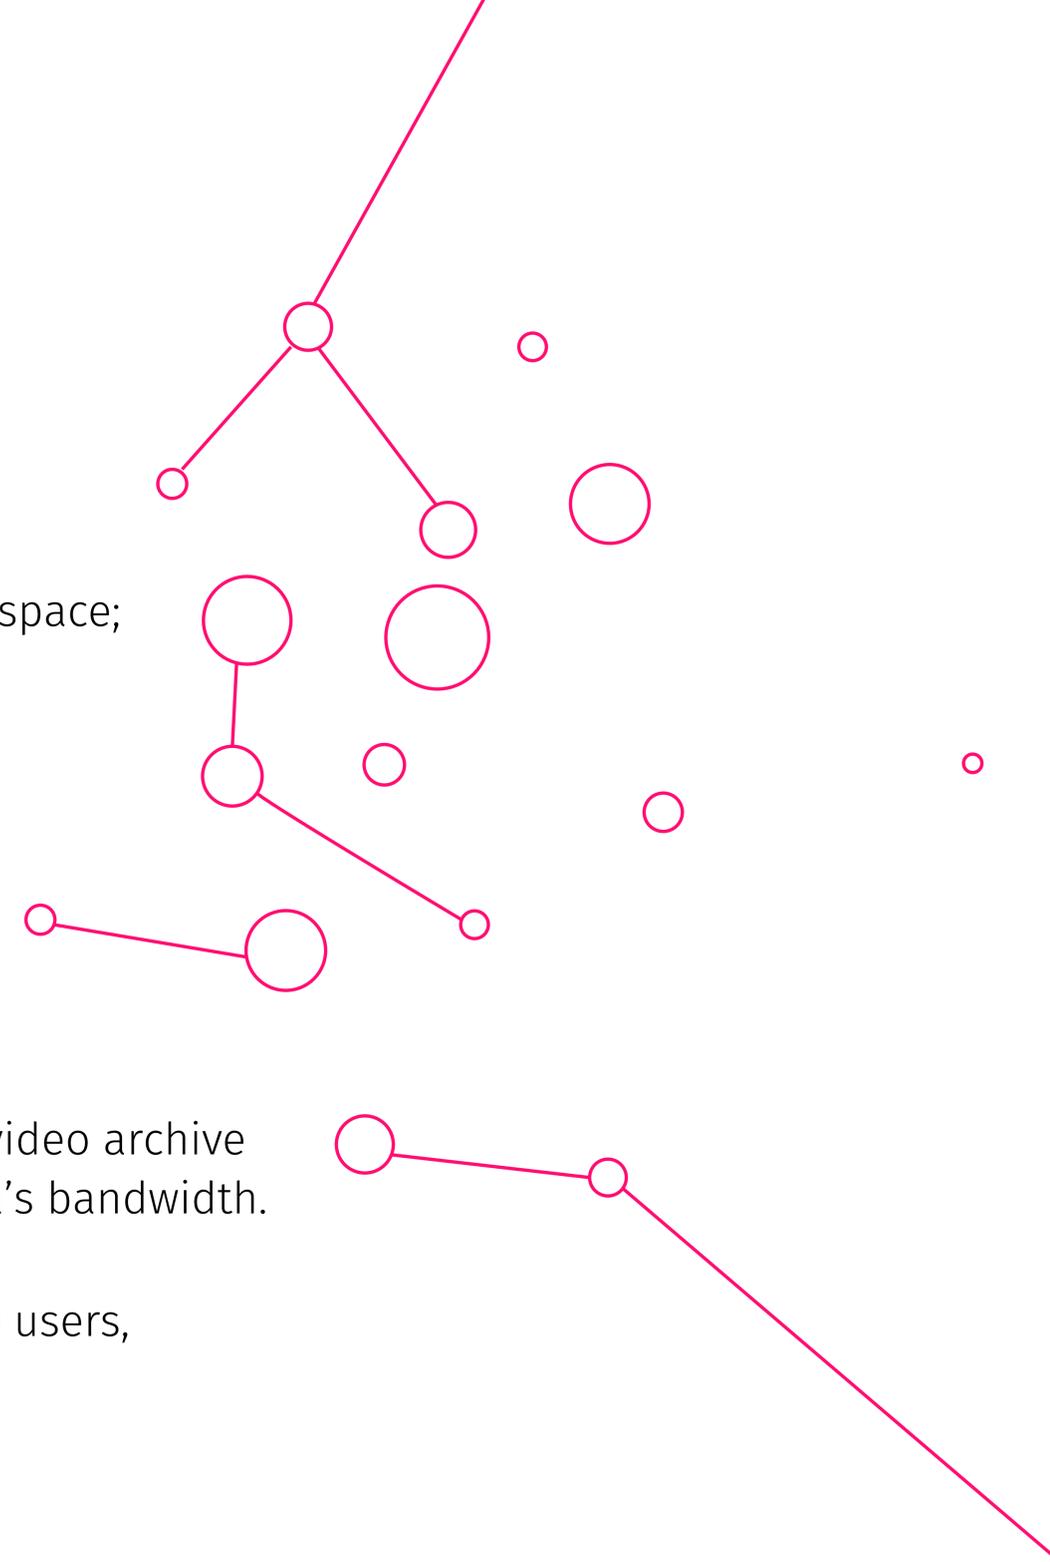

- **Operating system:** Ubuntu 14.04 or later, Debian 7 or later;
- **CPU:** 2-core CPU;
- **Memory:** 8Gb RAM;
- **Virtual server support:** Yes;
- **Database:** PostgreSQL;
- **Hard drive type:** SSD;
- **Hard drive size:** 64GB of free disk space;
- **Dedicated server:** Yes.

## Video streaming server (Streamer)\*. Transmits video and stores archives:

- **Operating system:** Ubuntu 14.04 or later, Debian 7 or later;
- **CPU:** Xeon E-3 1230v5 3.4 GHz and higher;
- **Memory:** 32GB RAM;
- **Dedicated server:** Yes.
- **Hard drive type:** HDD / SSD;
- **Hard drive size:** depends on the video archive storage requirements and camera's bandwidth.

This configuration of the streaming server is suitable for 500 cameras with 1 MB/s stream, 500 users, with inactive ingest failover and no mosaics. At increase of the bitrate to 2 MB/s, the number of cameras per server should be reduced twofold (up to 250).

\* These recommendations are relevant only if the server does not run any applications other than Flussonic.
